

Sales Performance Dashboard – India Sales

Project-1

[Link to Dataset](#)

Project Overview

This project aims to build an interactive Sales Performance Dashboard to track sales, profit, quantity, and profit margins across regions and products in India. It provides a real-time view of key performance indicators (KPIs) and trends to help identify growth opportunities and underperforming areas.

Introduction

Sales data is a goldmine of insights. However, in raw form, it's difficult to derive meaningful decisions. By transforming sales data into a visual and interactive Tableau dashboard, we can monitor business health, track performance metrics, and take action based on facts rather than assumptions.

Why This Project?

- Businesses need fast, visual insights.
- Stakeholders want simple dashboards, not spreadsheets.
- Quick monitoring of KPIs helps decision-making.
- Regional comparisons identify strong/weak markets.
- Trends over time reveal business growth or decline.

Problems with Raw Data

- Difficult to compare performance across regions.
- No quick view of top-selling or worst-selling products.
- Lacks visual trends in sales or profits over time.
- No KPI summary like total sales/profit/margin.
- No profit margin calculation.
- No interactive filters or drill-downs.

Tool Used

Tableau Public

Tableau was used as the primary data visualization tool for this project. It enabled the creation of interactive dashboards and visual analytics that transformed complex employee data into clear, actionable insights. Tableau's drag-and-drop interface, dynamic filtering, and ability to handle large datasets made it ideal for exploring trends in attrition, performance, compensation, and job satisfaction. The dashboard allows users to explore data across multiple dimensions with ease, supporting data-driven decision-making for HR professionals.

20 Problems Solved by the Dashboard

No.	Problem	Solved By
1	No KPI overview	KPI Cards (Tiles)
2	No trend visibility	Line chart (Sales Over Time)
3	Region-wise performance unclear	Map View
4	Missing product insights	Bar Chart by Product
5	No profit margin calculation	Calculated Field

6	No filter by region	Region Filter
7	Hard to compare categories	Stacked Bar Chart
8	No profit loss identification	Color-coded Profit Margin
9	Sales concentration unknown	Heatmap
10	Quantity trends missing	Line Chart of Quantity
11	Underperforming products	Top/Bottom Filter
12	Low vs high-profit regions	Map color logic
13	No dashboard summary	Combined KPI Dashboard
14	No drill-down by date	Date Hierarchy
15	Difficult to spot trends	Smoothing line charts
16	No average calculation	Average Profit Margin field
17	Static reports	Interactive Filters
18	Overloaded spreadsheets	Visual Dashboards
19	Decision-making delay	Real-time Tableau updates
20	Poor presentation	Clean, polished UI

Key Features of the Dashboard

- KPI Tiles for Total Sales, Total Profit, Quantity, Avg Profit Margin
- Trend Line for Monthly/Quarterly Sales
- Map View to visualize Sales by Region
- Category-wise Breakdown (using Bar and Pie Charts)
- Color-coded Profit Margin (Low/Medium/High)
- Interactive Filters: Region, Category, Product

Technical Implementation

- Tool: Tableau Public
- Data Source: Simulated India Sales dataset (10,000 rows)
- Calculated Fields:
 - Profit Margin = $\frac{[\text{Profit}]}{[\text{Sales}]}$
 - Profit Margin % = $\text{ROUND}([\text{Profit Margin}] * 100, 2)$

Margin Color Code =

tableau

CopyEdit

```
IF [Profit Margin %] >= 20 THEN "High"
ELSEIF [Profit Margin %] >= 10 THEN "Medium"
ELSE "Low"
END
```

Charts & Visuals Used

Chart Type	Purpose
KPI Tiles	Display high-level metrics
Line Chart	Show trends over time
Bar Chart	Compare product/category performance

Conclusion

The Sales Performance Dashboard built using Tableau provides a powerful and user-friendly interface to monitor and analyze sales data. With KPIs, trends, regional maps, and category-level insights, businesses can make data-driven decisions quickly and identify areas for growth and optimization. This project reflects how data visualization transforms raw data into actionable intelligence.
