

TABLEAU ASSIGNMENT — 1

Topics: Connecting Tableau to datasets, understanding Dimensions & Measures, working with Data Types, navigating the interface, and creating basic tables with sorting and renaming.

 [Click here to download the Sample Superstore Dataset](#)

Theoretical Questions (Answer in 1-3 lines)

1. What is Tableau and why is it used for visualization?
2. What is the difference between Dimensions and Measures in Tableau?
3. Define the term Data Pane in Tableau and its purpose.
4. What is the difference between a Live connection and an Extract connection in Tableau?
5. Name three file formats Tableau can directly connect to.
6. What is the purpose of the Show Me panel in Tableau?
7. Explain how Data Types in Tableau (e.g., String, Date, Number) influence visualization.
8. Why is it important to rename fields or change their data type before creating visualizations?

Practical Questions(Perform the tasks in Tableau using the provided dataset.)

1. Connect Tableau to the file "Sample – Superstore.xls" and load the dataset.
2. Navigate the Tableau interface and identify:
 - Sheets tab
 - Dashboard tab
 - Story tab
3. In the Data Pane, identify 3 Dimensions and 3 Measures from the dataset.
4. Create a basic table showing Sales by Category.
5. Expand the table to show Sales by Category and Sub-Category.
6. Change the data type of Postal Code to String (if not already).
7. Sort the Category table in descending order of Sales.
8. Rename the field Sales to Total Sales in Tableau.
9. Save the Tableau workbook as Assignment1_Tableau_Basics.twbx.
